To Login AWS Management Console Via MFA

DEMO Steps:

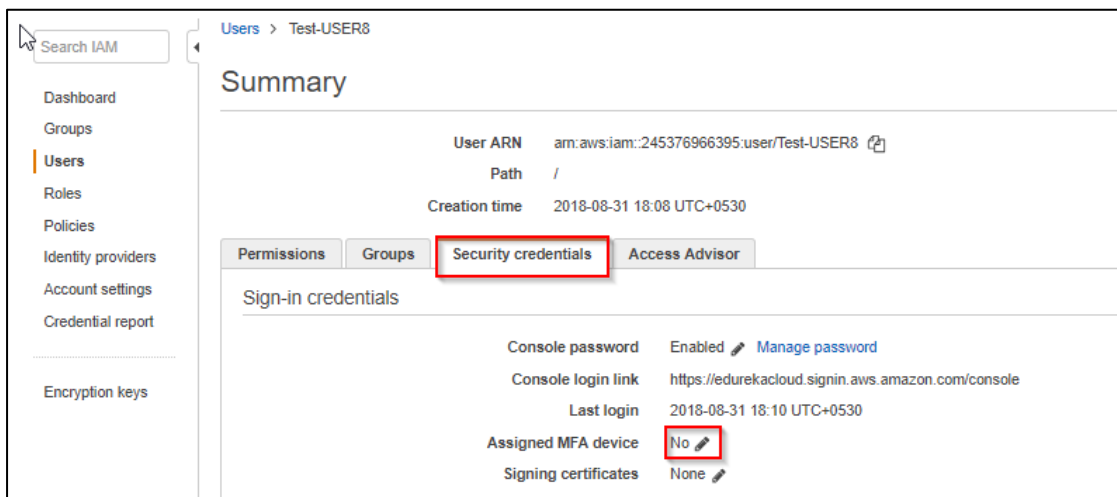

Step 1: Go to AWS console and select AWS services and under the Security, Identity & Compliance click on “IAM”

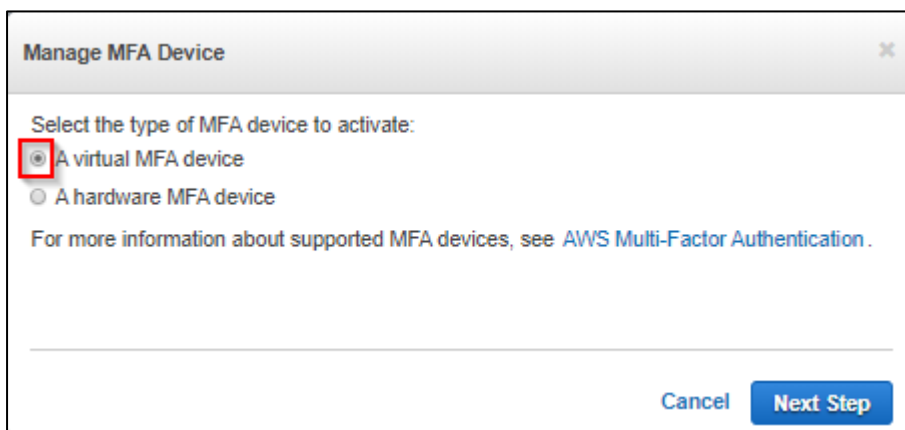

Steps 2: Go to users and select the user to whom you want to enable the MFA

Step 3: In users under **Security Credentials** tab change the status of “Assigned MFA device”

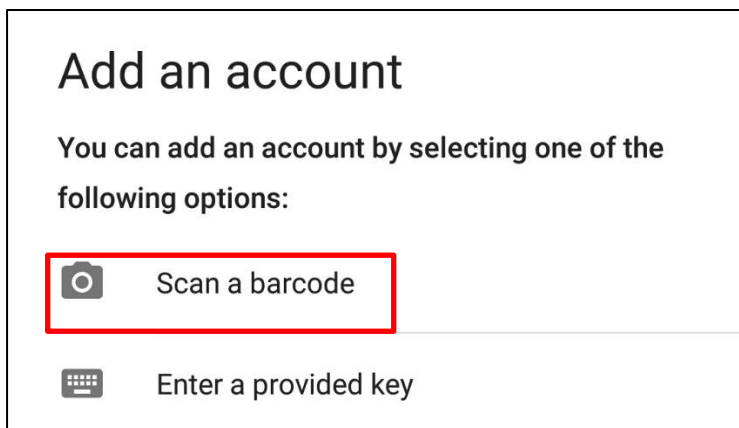

Step 4: Select **virtual MFA device** and click on “Next Step”

Step 5: Download the **Google Authenticator App** in your cell phone

Step 6: Select “Scan a Barcode” and scan the barcode displayed in AWS Console

Step 7: After scanning enter the authentications code displayed on your cell phone in management console

Module 1: Introduction To AWS DevOps

Account added

367 782

Amazon Web Services (test@edurekacloud) 

When you're asked for a verification code, find it here. The code changes frequently, so there is no need to memorise it.

ADD ACCOUNT

Manage MFA Device

If your virtual MFA application supports scanning QR codes, scan the following QR code with your smartphone's camera.

[Show secret key for manual configuration](#)

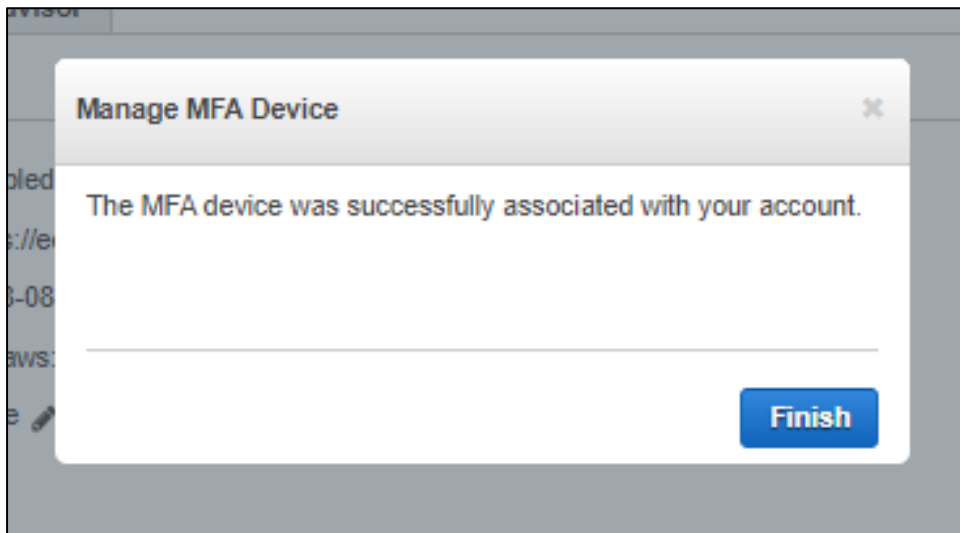

After the application is configured, enter two consecutive authentication codes in the boxes below and choose Activate virtual MFA.

Authentication code 1

Authentication code 2

[Cancel](#) [Previous](#) [Activate virtual MFA](#)

Step 8: If all the steps are in sync then it will notify you successful association of MFA with your account, then click on “Finish”

Step 9: Log out the current account and login using the user to whom you have assigned MFA

Step 10: Now it will ask for MFA code so enter the current code displayed in your cell

Conclusion:

We have successfully assigned the **MFA** to the user
